PROFESSIONAL SUMMARY

Full Stack Developer with 2 years of experience digitalizing business operations in the mining industry, replacing manual and Excel-based processes with reliable internal applications. Built and maintain 15+ applications across 5+ divisions for 3,000+ employees. Covers the full Software Development Life Cycle (SDLC) using an Agile methodology: holding requirement sessions with users and coordinating with Business Analysts, building prototypes, developing against Business Requirement Documents (BRD), testing and running User Acceptance Testing (UAT) with users before production, deploying to servers, and onboarding users to new applications. Also responsible for maintaining running applications and servers, reporting work progress, and mentoring and supervising interns.

EDUCATION

Bachelor of Informatics Engineering, Mercu Buana University | GPA: 3.81 | 2021–2025

Thesis: *Comparative Analysis of Multilayer Perceptron and Gradient Boosting Classification Algorithms for Phishing Website Detection*

PROFESSIONAL EXPERIENCE

IT Application & Development Support

PT Mineral Alam Abadi | April 2026 – Current

- Independently designed and developed Performa+, a KPI Management System (Planning, Monitoring, Evaluating) for 2,400+ employees, replacing manual Excel-based KPI collection with real-time monitoring and transparent supervisor score adjustments.
- Independently built a deed monitoring application for the Legal team, giving clear visibility into the deed-making process.
- Developed and maintain CIS Plant, a platform for plant asset data covering stock in, stock out, stock opname, lending and borrowing, and stock transfer, with a single consistent dataset across sites.
- Collaborated with another developer on the Supply Chain Tracker, giving planners visibility into plant asset tracking so they can plan ahead.
- Migrated the Employee Portal (EIP) from PHP to Next.js, added new modules, and built an AI assistant with token usage limits and prohibited-word filtering.
- Developed additional features in the CPS Automation service, pulling data from the vendor's CPS and connecting it to internal systems.
- Independently developed a centralized monitoring system consolidating audit trails from 10+ internal applications for faster issue investigation.
- Built an automated ETL pipeline syncing employee data from Mekari Talenta into the internal database every 3 hours, creating a single source of truth for all systems.
- Set up GitLab CI/CD pipelines with Docker, replacing manual deployments, and Grafana dashboards to monitor API response times.
- Maintained and enhanced GA Asset Management, E-Bidding, Coretax Sync, Email Service, and the Blob (file) Service, adding features and fixing bugs.
- Conducted user socialization and User Acceptance Testing (UAT) for new applications.
- Handled change requests from users and application deployments.
- Performed server migration and ongoing server maintenance.
- Supervised and mentored interns.

Full Stack Developer Intern

PT Mineral Alam Abadi | Aug 2025 – Maret 2026

- Collaborated with stakeholders across business and technical teams to gather requirements, translate business processes into technical solutions, and deliver enterprise-grade applications.
- Independently designed and developed the HRIS used by 3,000+ employees, replacing manual, one-by-one signature collection with digital multi-level approvals.
- Migrated the internal IT website from legacy PHP to Next.js, improving performance, maintainability, and scalability.
- Migrated the E-Signature platform used by the Legal Division from legacy PHP to Next.js.
- Developed the software tracking and IT spare parts modules in the IT Management system, covering software installed on 500+ company laptops and 200+ IT spare parts.
- Conducted R&D on Identity and Access Management (IAM) and Single Sign-On, exploring both a solution built from scratch and one based on Keycloak.
- Collaborated with the team to develop the General Affairs (GA) inventory application and built its dashboard.
- Added new features to the HSE platform used across 5+ mining sites.
- Tested the Blob Service before release to production.
- Fixed bugs across several applications, handled change requests, and held meetings, presentations, and progress updates with the users who requested applications.

Full Stack Developer Intern

PT Winnicode Garuda Teknologi | Mar 2025 – Jul 2025

- Designed and developed a face recognition–based attendance system for **100+ employees**, replacing manual/card-based attendance with automated facial validation deployed on-premise for corporate operations.
- Integrated face-recognition libraries into the attendance workflow, improving validation speed and reducing attendance fraud/buddy-punching risk.
- Built RESTful APIs and responsive frontend interfaces for real-time attendance monitoring and reporting, giving HR direct visibility into attendance data without manual recap.

Full Stack Developer Intern

PT Maleo Edukasi Teknologi | Sep 2024 – Dec 2024

- Developed NanEdu, an edutech platform featuring authentication, course management, quizzes, and gamification systems, from initial design through production deployment.
- Implemented reward mechanisms and daily activity tracking to increase user engagement and course completion rates.
- Built full-stack features including user management and third-party API integrations, then deployed and monitored the platform in production (PythonAnywhere).

TECHNICAL SKILLS

Frontend: Next.js (React), Nuxt.js (Vue)
Backend: Node.js, NestJS, Laravel, CodeIgniter, ASP.NET, Django, Gin (Go)
Mobile: Flutter
Architecture & Security: REST API, OAuth 2.0, OpenID Connect (OIDC), SSO, Keycloak
Database: PostgreSQL, MySQL, MongoDB
Caching: Redis
DevOps & Infrastructure: Docker, GitLab CI/CD, Grafana, Git, Postman, Jira

CERTIFICATIONS

- **Software Engineer** - BNSP (Indonesian National Professional Certification Agency)
- **Database Design** - Oracle Academy
- **Database Programming with SQL** - Oracle Academy
- **JavaScript, SQL, Python** – HackerRank
- **Backend & SQL** – Dicoding Indonesia

PROJECTS

Personal Finance Management App

- Independently designed and developed an offline-first personal finance mobile application using Flutter, built to explore mobile development and solve the common problem of needing reliable expense tracking without constant internet dependency.
- Implemented core financial features including income and expense tracking, fund transfers between accounts, budgeting with category limits, and savings goal tracking, giving users a complete view of their financial habits in one app.
- Built visual reports and charts to help users analyze spending patterns and track progress toward financial goals over time.
- Developed a NestJS backend with a MySQL database to support data synchronization, allowing users to seamlessly sync their offline transaction data once connectivity is restored, ensuring no data loss between devices.

News Portal

- Independently developed a public-facing news portal using Laravel, covering the full content lifecycle from article creation and publishing to public consumption.
- Built a content management system (CRUD) enabling article creation, editing, categorization, and publishing workflows.
- Open-sourced the project on GitHub, gaining community traction with external stars and forks — validating the project's code quality and usefulness to other developers.
